

Agenda:

- Update code cleanup progress
- Discuss presentation
- Evaluation and lessons learned

Update code cleanup progress

Discuss presentation

- describe the idea
 - Concepts
- show off the application in action
- show URL
- any big design choices you made
 - The delivery data model - a delivery object can change status from request
- challenge you ran into
 - This application involves some complex interactions between users (e.g. when to claim, deliver and accept items) so we should be more specific with the procedure our app will follow.
 - Through the working progress, we narrow down the scope of our app (from targeting general public to MIT students, setting fixed pickup locations and limited grocery stores).

Evaluation and lessons learned
