Agenda
- Feedbacks on last week tasks
- How far we are in this project
- Demo
- TA meeting

Meetings minutes
- Progress past week
  - Czarina: UI
  - Chou: refactor and clean up a lot of code, remove MIT ID
  - Joseph: minimum shipping rating, punishment, code cleanup
  - Vincent: fix payment page UI, accept delivery button, error handling for payments, and tests
- Existing bug
  - Add id to close/accept/reject notif&js
  - Change put request when user edits profile to not redirect back
- TODOs:
  - Czarina:
    - styling of tables and modals
    - fix credit card details in modals
    - additional description to more info
    - deliver now to set pickup time
    - remove background from expired notif icon
    - design a logo
    - change pickup point(s)
  - Chou:
    - bugs in emails (null pickup time)
    - fix email layout, send another verification email when login with an unverified account
    - alert messages
  - Joseph:
    - move instance to static methods & fix the tests
    - do the sorting
  - Vincent:
    - profile page display
    - PUT request and edit one field in profile page at a time
    - write tests for addCompletedRequest, addCompletedShipping
    - write a function for edit profile in User model, write tests for that

- Use cases that we want to show in the demo:
  - request - cancel
    request - expired - close (notification)
  - claim - expired - reject

claim - reject - close delivery
claim - set pickup time - reject - close delivery
claim - set pickup time - accept - close delivery
claim - set pickup time - close delivery
