Agenda

- MVP walkthrough and feedback

- Revised design

- Some problems in our current app
  - The accept/reject button
  - Pickup time dilemma

Meeting Minutes

-

Progress Report

- Meetings
  - We met on Tuesday and Sunday to assign works to each member and revise the overall design
- Coding progress
  - Additional features: Rating data model, Stripe connection, email verification when signing up, notifications are mostly done
  - More user interface pages are added: profile page, notification page, rating and payment pages
  - Action results: users are now informed of the result of their actions (requesting, claiming, canceling, delivering, etc.), i.e. if it was successful or not, and possible reasons why it failed
  - More client-side validation (e.g. make sure price is valid with up to 2 decimal places, deadline is after current date and time, etc.)
- Revised design
  - getting rid of rating model
  - stripe for payment
  - email notifications
  - no MIT IDs
  - account verification
  - pickup time as described above
  - API keys in config file
  - Requested section from TA explaining payments
